Prestige

Prestige is a 1.4 - 1.6 mm thick leather from free-range South American bulls. The leather is dyed through in the barrel and presents itself with a rustic grain structure and a beautiful lustre. All characteristics, such as horn bumps, tick bites and skin folds, remain fully visible and symbolise the natural origin of this pleasantly tactile leather. By dispensing with an opaque colour, breathability is retained and the leather quickly feels pleasantly warm. Natural leathers are more exposed to external influences than opaque leathers. Avoid strong sunlight and care for the surface with our special care products. Prestige changes its surface with use. For the connoisseur, it becomes more and more beautiful over time and gives the furniture the character of a unique piece.

Leather Category IV
Light resistance: 4 to 5
